Book Descriptions:

Casio bp-100 manual for casio blood pressure watch

The BP100 is not a direct descendant of the JP series watches, but certainly builds on that technology. Unlike other Casio watches of its time, this model came in a custom designed box. Not only that, it was sold in different custom package versions. I have seen a long slender cardboard box version as well as the version shown here. Removing the plastic shrink wrap and outer sleeve reveals a plastic case. Opening that case reveals the watch seated on a red velvetlike tray. In that tray, you will find an instructional audio cassette tape. Since I got this watch in 2008, I didnt have a cassette tape player to listen to the tape. I wonder what it sounds like. And if you lift that tray, you will find not one, but TWO manuals. The blue manual is the abbreviated version that briefly covers the blood pressure functions, whereas the black one covers the entire watch in detail. The special packaging and redundant instructional material leads me to believe that Casio intended this watch to be used by people unfamiliar with technology. Im not sure how successful Casio was in their marketing strategy, but its interesting to note. Enough about packaging, get on to the watch already. Its got a builtin microlight, along with alarm, stopwatch and timer modes. But what makes this watch special is the blood pressure functions. The watch actually uses a combination of two sensor technologies. The pad on the left reads the pulse using a photosensor, exactly like the JP100W. The BP100 manual includes a schematic of this photosensor technology. The pad on the right is one lead of a twolead ECG probe thats built into the watch. Can you guess where the other lead is. Its on the watch backplate. Those leads measure the electrical signal that accompanies your heart beat. For the system to work properly, the watches backplate must make contact with your bare wrist. <http://rcot.org/userfiles/el-usb-1-manual.xml>

casio blood pressure watches.

In addition, your right hand can only touch the two sensors because if you rested your right thumb on your left wrist or vice versa while making this measurement, you'd create an alternate conduction path. But how does Casio use these sensors to measure blood pressure. Well, it does not. The watch obviously doesn't have a built-in cuff or air pump that can measure the real absolute blood pressure. I found this excellent website that describes the science in detail, so I'll leave interested readers to follow up on this link. To take advantage of the PWTT concept, it just so happens that you need to take the measurements at your extremities. Lucky for Casio, a wristwatch is the perfect candidate for this application. PWTT, by itself, can only tell you the relative changes in blood pressure, not an absolute number. Therefore, you have to input some basic data into the watch before using any of its blood pressure features. After you input your normal resting blood pressure, you're good to go. You can also input your postexercise BP to use the more advanced functions. When all that's done, just press the button and relax. But once you do it right, you will be greeted with this screen. Note that it also measures your heart rate. The watch can store up to 30 BP measurements, which is automatically timestamped. You can even view your past measurements in graph form. Note that I only have 3 datapoints stored in the below graph. If you had all 30 datapoints stored, it would show a nice filled graph. One last thing, the back plate on the BP100 breaks two Casio conventions. 1. It does not show the module number. 2. It has a serial number, which is very unusual for a 90s model with resin case. The BP100 was successful enough to have several variations and follow-up models. These include the BP120, BP200 and BP300. As far as I know, they are functionally the same but have some major cosmetic changes. If you are looking for one, good luck. <http://alliedteamworkconstruction.com/nbloom/fckuploads/el-uso-del-pendolo-manual-pdf.xml>

And if you are looking for a PDF manual for this watch, here it is ! Thank you very much for writing this blog to the precise details. Keep it up. Thank you ! I could, however to it on my own and now that, after years of neglect, I have had the battery replaced, it works fine. I have the manual somewhere but it is easier to download it, thanks to you. The screen is gone black and i was wondering if is posible to repair this damage. Any help or advice would be greatly appreciated. Thank you for your attention. Best regards, Alvano Indonesia Thks thousand times. It works fine as good as new after 15 years! Keep up the good work. But when I finally found the watch again, I couldnt find the instructions to use it correctly. Major thanks to you and your willingness to put it online! Changing the battery is quite easy although replacing the thin rubber oring, situated between the body and the backplate can be a bit fiddly. I got mine in 1992 and it still works fine. Now that Ive read the manual and set it up properly I find its measurements to be pretty similar to my Omron automated cuff and Im back to wearing it daily. I still have the cardboard presentation unit used to show it in shop windows. Casio always has been a pioneer in electronic wristgadgets that worked perfectly well. Together with Seiko, of course TVwatch, pulsewatch with belt, talking watch. Japanese are the best watchmakers! Please keep it alive in the name of the old LCD Casio watches! One of my favorite. Works as good as the smartwatches we see nowadays. And I presume Italian speaking people will say the same with the Italian version and so on. Could you put at least the Spanish, French, Italian and German versions on line. I know its a lot of work, but it could make some lives easier. Thanks in advance! Really good review you did. Thank you.

It i impossible for me at least to figure out how to do anything with either, and Im sure these both workjust replaced button cells with a CR2016 for the blood pressure watch and a CR2032 for the TV remote control watch. Thanks.A surprise the blood pressure monitor watch apparently stored my fathers settings. Since he passed away 14 years ago, this ended up being even more special now as I see how it works. I was surprised to see it was newer than I thought. I had used the TV watch so I know it works. I had found this video re the BP100 watch but the manual is key. I like the commentnot designed for technical people. Eek! Look at what this watch can do. And my dadwas a rocket scientist, reallyhe loved these gadgets. Had one of the first Accutron watches. With a mini tuning fork inside, no kidding. No wonder my house is filled with Casioskeyboards and now watches. Thanks all!I keep batteries in the XWP1 and CTK6200, I think those work that way. Now I can measure how my heartrate goes up when I walk over to the refrigerator always an adventure for me I really need to get out more, or my blood pressure when I mess up one of my keyboards! The condition of the watch is excellent and the display is working perfectly. The gold plating on the watch is in lovely condition. The blood pressure sensor works fine for me, but I know these work for some people and not others due to the specifics of a persons physiology such as skin thickness etc, and so as seems to be standard with these vintage watches, it is sold as seen and no returns accepted, sold as spares or for repair. It has minimal to no signs of wear. Please see attached pictures for reference. Comes in original packaging with manual and audio tape. The seller is "anulkaxpl" and is located in Romeoville, Illinois.To see how it looks with the form, please click here. You are currently using an outdated browser. You can update your preferences, withdraw your consent at any time, and see a detailed description of the types of cookies we and our partners use in our Cookie Policy. It can measure your Blood Pressure and Pulse Rate. Comes complete with a new battery, installed by the dealer and comes with Casio strap. This exclusive watch was introduced by Casio in the eighties. Very collectable watchset in this pristine condition. See the smartwatches Casios history of wrist designs, this one is very special. See pictures for details. From a smoke and pet free home.
